Dear Sir/Madam,

I am currently studying computer science undergraduate program at Akdeniz University, in Antalya as a third grade.

I have decided to apply for this internship because I am sure it would strongly enrich my future studies and help me in my prospective career.

Moreover, I consider this programme as a great opportunity to see new cultures, meet new people, gain new experiences both in the field of software and in real terms, and observe different working styles.

I have been developing projects in the field of Frontend and partially Backend for about 2.5 years. I have always aimed to improve myself, to take on more difficult challenges and to move myself further while dealing with more difficult problems there. Even though my proficiency in this field is at a certain level, I know that there is no end to learning in software development and I am very excited to continue this learning process in your company. My determination to learn something allows me to do what I need to do by obtaining that knowledge in some way, even in matters that exceed my own knowledge.

For the pleasure of writing code and coming up with new products, writing code is not just a job for me to complete a task. I do that job lovingly and giving my hundred percent and in the best way possible. This allows tasks to be reduced quickly and the project to progress more quickly.

Thank you for taking the time to read my application. I am available for interview at any time and look forward to hearing from you soon.

Yours sincerely,
